Egnyte Expands Virtualization Services with Microsoft Hyper-V

Storage Sync Offers Most Comprehensive File Sharing via Cloud and On-Premises Storage

MOUNTAIN VIEW, Calif. - July 23, 2014 - Egnyte, the leading provider of an enterprise file-sharing platform built from the cloud down, today announced it has extended the platform's virtualization offerings to include support for Microsoft Hyper-V. Egnyte's flagship hybrid solution Storage Sync integrated with Hyper-V server enables customers to access, edit and share business files from any storage device deployed in a Windows environment. Compatible with Hyper-V, VMWare and its own native storage integrations, Egnyte now supports nearly all storage and virtual environments for businesses.

The powerful combination of Hyper-V with Egnyte Storage Sync is ideal for Windows administrators who want to cloud-enable existing Windows servers or other storage devices, and provide enterprise-class access and sharing to that data. Egnyte creates a unified platform for transparent access to mission-critical data stored behind the firewall across the corporate data center and to less sensitive files in the cloud. The leading approach combined with Hyper-V enables seamless multi-site collaboration from any device, regardless of where the files are physically stored.

"The Egnyte platform offers customers a choice for when, where and how they manage business files," said Rajesh Ram, co-founder and VP of products at Egnyte. "Many of our customers' IT solutions are deployed through Windows environments, and adding support for Hyper-V on our platform offers the flexibility of deployment options for accessing 100% of enterprise data."

The integration with Microsoft Hyper-V server provides a cost-effective option for Windows environments to quickly enable the full range of file services, including file sync and share, cross-office collaboration, business continuity for the use of existing infrastructure, and data migration to the cloud. The addition of Hyper-V simplifies the deployment and maintenance for IT teams to effectively leverage their storage devices to manage, access and collaborate on files.

Storage Sync for Hyper-V is already deployed with select customers and will be generally available on July 30, 2014. For more details on Storage Sync, click here.

ABOUT EGNYTE

Egnyte powers enterprise file sharing and access for more than 40,000 customers globally. The award-winning platform that's built from the cloud down optimally balances IT's need for

security, control, and compliance with users' demands for simple access to documents stored on-premises and in the cloud. Founded in 2007, Egnyte is a privately held company headquartered in Mountain View, CA. It is backed by venture capital firms Polaris Partners, Kleiner Perkins Caufield & Byers, Northgate Capital Group, Google Ventures, Floodgate Fund, and strategic partners Seagate Technology, CenturyLink and an unnamed major storage vendor.
