

Egnyte Unveils Storage Connect 2.0 with Behind-the-Firewall WebEdit

*Provides High Availability and Horizontal Scalability
for Diverse Enterprise Storage Environments*

MOUNTAIN VIEW, Calif. - August 25, 2014 - Egnyte, the only provider of a complete suite of enterprise file services built from the cloud down, today announced the latest version of one of its flagship products Storage Connect, a solution that enables direct access to files stored behind the firewall without data or metadata moving to the cloud. Storage Connect 2.0 introduces cluster deployments, providing high availability and horizontal scalability to meet the privacy and security requirements of enterprise customers. Egnyte also unveiled WebEdit for Storage Connect to enable customers to edit files stored behind the firewall in their native applications.

The new cluster deployment capability vastly increases the supported number of concurrent users, providing seamless scalability as businesses grow and the complexity of their storage environments increases. This unique deployment model also provides redundancy to the file access layer to ensure high availability from anywhere and any device, all completely behind the corporate firewall.

WebEdit for Storage Connect allows users to select a file from the Web UI and automatically open, edit, and save it in its native application. This functionality, paired with Storage Connect 2.0, creates unified collaboration by allowing users to work on files without moving them to the cloud or using a VPN client.

"Storage Connect helped us bridge the gap between our needs around accessibility, flexible deployment, and concerns about moving protected, sensitive files to the cloud," said Joshua Perkins, director of Information Services at American Roll Form. "Our executives can confidently access protected files from virtually any device, and we can be confident that those documents are safe on our storage platforms behind our security systems. It is a win-win for both teams, and the business."

Storage Connect 2.0 additionally offers:

- **Explicit File Locking:** Files can now be locked from the Egnyte Web UI when accessed via Storage Connect. Files locked by others can be previewed, downloaded and copied; however, they cannot be moved, renamed, or deleted, nor can new versions of the file be uploaded.
- **Support for DMZ Deployment:** Storage Connect instances can now be deployed in a demilitarized zone (DMZ) in the corporate network, rather than within the network itself. This allows for secure deployments with ease of access from outside the network.
- **Support for Early SSL Termination:** -Storage Connect instances can now be configured to not terminate a Secure Socket Layer (SSL) connection. With this structure, another device such as an external load balancer can be configured to terminate SSL and pass HTTP traffic to the Storage Connect instance.

"As large enterprises continue to move to the cloud, it is imperative to have options in how they access their files," said Rajesh Ram, co-founder and VP of Products at Egnyte. "With Storage Connect, we are able to provide users private access and collaboration tools to their most sensitive files behind the firewall and enable access to their more 'green' files via the Cloud File Server. In addition, Storage Connect 2.0's cluster deployment capabilities create unprecedented scalability for businesses to securely and privately access their files."

Pricing and Availability

Storage Connect 2.0 and WebEdit for Storage Connect are now generally available for Egnyte customers. For more details on Storage Connect 2.0, click [here](#).

ABOUT EGNYTE

Egnyte powers enterprise file services and access for more than 40,000 customers globally. The award-winning platform that's built from the cloud down optimally balances IT's need for security, control, and compliance with users' demands for simple access to documents stored on-premises and in the cloud. Founded in 2007, Egnyte is a privately held company headquartered in Mountain View, CA. It is backed by venture capital firms Polaris Partners, Kleiner Perkins Caufield & Byers, Northgate Capital Group, Google Ventures, Floodgate Fund, and strategic partners Seagate Technology, CenturyLink and an unnamed major storage vendor.
