

## **Egnyte and Procore Team Up to Provide A Seamless Replacement For Outdated Processes and Drive Down Costs**

*Egnyte adds two-way sync for better documentation, a central repository, data retention and more*

**MOUNTAIN VIEW, Calif. – September 18, 2019** - [Egnyte](#), the only business first security content platform, today announced an integration with [Procore](#), a leading provider of construction management software, that will provide the construction industry with a better way to work that replaces the outdated, manual approach to accessing, changing, and reviewing files.

“Construction tech is gaining traction as companies in the field are dealing with a massive increase in the amount of data managed and shared with various stakeholders,” said Ronen Vengosh, VP of Platform and Ecosystem of Egnyte. “Now with two-way sync, anyone with granted access can share drawings, schedule updates, and access files stored in one central repository instantly on a smartphone, computer or tablet.”

The use of tablets and smartphones in the field has changed how information is exchanged on the jobsite, meaning less time in the trailers and more time in the field - resulting in higher efficiency. In order for this to happen, it is paramount that all employees are on the same page, and working on the most recent and latest set of data to avoid expensive errors and re-work.

By providing a first of its kind integration, our hope is to reduce the amount of time and money spent in an already “high risk, low margin” industry. With Egnyte and Procore, all documentation is securely stored in a central repository which helps with data retention, and closeout of a construction project.

“With this new integration our mutual customers have found great value and savings in the ability to automate the process of storing documents in both Procore and Egnyte, allowing both Procore and Egnyte users to share the same files in near real-time,” said Doug Gibson, Business Development Manager, Procore.

To learn more about this first of its kind integration visit our [blog](#) or [Procore's App Marketplace](#).

## About Procore

Procore is a leading provider of construction management software. Our platform connects every project contributor to solutions we've built specifically for the construction industry—for the owner, the general contractor, and the specialty contractor. Procore's App Marketplace has over 150 partner solutions that integrate seamlessly with our platform, giving construction professionals the freedom to connect with what works best for them, even if we don't build it. Headquartered in Carpinteria, California, Procore has offices around the globe.
