

A Silver Lining for File Server Replacement

Cloud storage has improved content access for modern businesses, but it has failed to offer the security and control IT needs.

Egnyte Connect brings the accessibility of the cloud to the controllable confines of on-premises file servers.

Gain without the pain

File server pain points

Complicated to administer

Multiple servers in multiple locations need multiple admin points and can result in file replication issues.

Expensive to maintain

Hardware & software upgrades, antivirus, ransomware, network bandwidth, VPN and so on.

Limited remote access

Limited access to content with no mobile outside access and the hassle of managing VPN issues.

Version control issues

Copies of the same file are stored on multiple file servers and can fall out of sync.

Requires a backup solution

Without a plan, all content is always at risk. It's costly, time consuming and drains resources.

The Egnyte solution

Simple unified administration

Administer all users, sites, permissions, auditing, reporting and more from single pane of glass.

Lower TCO

Hybrid deployments use less bandwidth while minimizing hardware and software requirements.

Simple, secure anywhere access

Collaborate on content from anywhere using desktop, web, or mobile device - without a VPN.

Never lose edits

Global file locking prevents files from inadvertently being overwritten and version history makes it easy to go back.

Built in backup

We keep content backed up across our data centers and with a hybrid deployment it's also kept on premises.

Go beyond the standard solutions

NTFS-like folder and permissions structure

- Make it easy migrating file servers to the cloud, even the ones with non-inherited permissions

Hybrid deployment options

- There is no faster way to collaborate on large files and no more effective way to overcome poor bandwidth

Improved administration and control

- Centralized reporting, trash management and powerful auditing

Better security and total visibility

- Know where sensitive data resides and who can access it
- Identify user behaviors and receive real-time alerts when anomalies are detected

Integrated productivity apps

- Collaborate using popular apps including Microsoft Office, G Suite, Salesforce, DocuSign, and many more

Egnyte Connect delivers

Significantly lower costs

- Windows Server licenses can be eliminated with cloud and hybrid deployments
- Eliminate disaster recovery (DR) expenses with automatic backup across our data centers
- Reduce network requirements to sites with limited bandwidth using a hybrid deployment with delta sync
- Includes integrated antivirus and ransomware protection

Reduced administrative overhead

- Make changes from anywhere in seconds with a web-based single point of control for the entire company
- Skip the hassles of Distributed File System Replication (DFS-R). Reliably sync files using the cloud instead
- Solve permission replication challenges with ease; once and for all
- No more having to “age out” data to get it off hardware, Egnyte Connect scales as needed

Improved resiliency and flexibility

- Store content in Egnyte US or EU data centers, or repositories from Amazon, Google, Microsoft etc.
- Prevent content loss due to accidental file overwrites through automatic file versioning capabilities

Better collaboration

- Share content via browser, desktop, and mobile apps from absolutely anywhere
- Always maintain full control and visibility wherever content is shared
- Avoid inbox overflow by sending download links instead of using email attachments

Lightning speed and performance

- Get hybrid deployment for the fastest access to content at remote locations - even with limited bandwidth
- WAN acceleration and VPN-less design provide dramatically improved performance for end-users
- Allow temporary, controlled access to specific content without sacrificing security or administration

Enhanced security and data protection

- Experience an enterprise-grade solution with end-to-end encryption and industry-leading security
- See where sensitive content resides in real time and who has access to it (requires Egnyte Protect)
- Receive notifications in real time if a user engages in unusual behaviors (requires Egnyte Protect)
- Avoid critical files from being deleted by mistake using centralized trash management
